Human Capital Development Role of HR during Mergers and Acquisitions

Yasmeen Rizvi*

The need for corporate firms to gain competitive advantage in a highly competitive global environment has necessitated the adoption of innovative strategies, one of them being mergers and acquisitions. Selden and Colvin (2003) have stated that 70%-80% of acquisitions fail, meaning that they create no wealth for the share owners of the acquiring company. Schmid (2003) has identified five major roadblocks to M & A success, three of which are HR issues. It has been established that there is a strong direct correlation between human resource involvement and ‘success’ in mergers and acquisitions (Schmidt, A.J., 2003). A positive association was found between human capital indicators and organizational performances (Seleim, Ashour, and Bontis, 2007). It was found that human capital development and enhancement in organizations contribute significantly to organizational competencies which in turn became a great boost for further enhancing innovativeness (Bontis and Fitzenz, 2002). As a research gap has been found in the study of human capital development interventions used during mergers and acquisitions, the present research aims to study the role of human capital development interventions used during integrations stage of mergers and acquisitions. Both quantitative as well as qualitative study has been carried out to capture a more complete portrayal of the subject.

Keywords: human capital development, organization, merger and acquisition

Introduction

The constantly changing global business environment requires firms to aim for competitive advantages through creative and innovative business strategies. This is essentially important for their long term sustainability. A study by Seleim, Ashour, and Bontis (2007) analysed the relationship between organizational performance of software companies and human capital. A positive association was found between human capital indicators and organizational performances. The indicators, such as training attended and team-work practices, tended to result in superstar performers which led to more productivity, which could be translated to organizational performances. A significant positive correlation was found by Dooley (2000) between the quality of developers and volume of market shares. It can be said that human capital indicators enhanced the firm performance directly or indirectly. A study by Bontis and Fitzenz (2002) established the relationship between human capital performances.

*Yasmeen Rizvi, Amity University Uttar Pradesh, India, 9873783658, email: yasmeenr@abs.amity.edu
management and economic and business outcomes. Human capital development and enhancement in organizations contribute significantly to organizational competencies which in turn became a great boost for further enhancing innovativeness. Contemporary literature to a large extent supports the fact that firm performance is positively impacted by the presence of human capital practices (Noe et al., 2003; Youn et al., 2004).

Researchers have endorsed that human capital development is a prerequisite to good financial performance (Delaney & Huselid, 1996). The significance of organizational human capital with regard to firm performance was further supported by Hsu et al. (2007). It has been found in a survey (Schmidt, 2003) that there is a strong direct correlation between human resource involvement and ‘success’ in mergers and acquisitions. Since changing an organization ultimately comes down to changing the practices, attitudes, and behaviors of the people who compose it, human resources departments are an essential component of change management. This research paper aims to study the human capital development role of HR during mergers and acquisitions. Both quantitative as well as qualitative study has been carried out to capture a more complete portrayal of the subject.

Literature Review

Defining Human Capital Development

Adam Smith defined four types of fixed capital (which is characterized as that which affords a revenue or profit without circulating or changing masters). The four types were: 1) useful machines, instruments of the trade; 2) buildings as the means of procuring revenue; 3) improvements of land and 4) human capital (Sullivan and Steven, 2003). ‘Human capital represents the knowledge, skills and abilities that make it possible for people to do their jobs. Human capital development is about recruiting, supporting and investing in people through education, training, coaching, mentoring, internships, organizational development and human resource management (LISC, 2009). Human capital means a stock of skills and knowledge resulting in the ability to perform labor so as to produce economic value. It is the skills and knowledge gained by a worker through education and experience with different areas in that field (Wikipedia, 2009). Schultz (1993) defined the term ‘human capital’ as a key element in improving a firm assets and employees in order to increase productivity as well as to sustain competitive advantage. Human capitals involves processes that relate to training, education and other interventions in order to increase the levels of knowledge, skills, abilities, values, and social assets of an employee which will lead to the employee’s satisfaction and performance, and eventually on a firm performance.

Rastogi (2000) stated that human capital is an important input for organizations especially for employees’ continuous improvement mainly on knowledge, skills, and abilities. Thus, the definition of human capital is referred to as ‘the knowledge, skills, competencies, and attributes embodied in individuals that facilitate the creation of personal, social and economic well-being’ (OECD, 2001). Undoubtedly, human resource input plays a significant role in enhancing firms’ competitiveness (Barney, 1995). At a glance, substantial studies were carried out on human capital and their implications on firm performance were widely covered and obviously, human capital enhancement will result in greater competitiveness and performance (Agarwala, 2003).

The rapid development of the human development theory has led to greater attention being paid to training related
aspects. Human capital investment is any activity which leads to the improvement in the quality (productivity) of the worker. Thus, training is an important component of human capital investment. It refers to the knowledge and training required and undergone by a person that increases his or her capabilities in performing activities which are of economic values. Contemporary literature has shown the importance of training. The workforce’s lack of training is related to low competitiveness (Green, 1993). A greater human capital stock is related with greater productivity and higher salaries (Mincer, 1997). Similarly, training is linked to the longevity of companies (Bates, 1990) which is in turn related to business and economic growth (Goetz and Hu, 1996).

Doucouliagos (1997) has noted human capital as a source to motivate workers, boost up their commitment and to create expenditure in R&D and eventually pave way for the generation of new knowledge for the economy and society in general. For small businesses it is a precious asset, which is positively related with business performance. Investments in training are very desirable, from both a personal as well as a social perspective. From the organizational perspective, human capital plays a very significant role in the strategic planning of how to create competitive advantage. Following Snell et al, (1999) it stated that a firm’s human capital has two dimensions which are value and uniqueness. A firm demonstrates value of its resources when they allow for improvements in effectiveness, capitalization of opportunities and neutralization of threats.

**Human Capital Development Role of HR during Mergers and Acquisitions**

Selden and Colvin (2003) stated that 70%-80% of acquisitions fail, meaning that they create no wealth for the share owners of the acquiring company. Successfully integrating the target and the acquirer’s businesses after the transaction closes is critical to achieving the goal of the combination, which is, making the new entity worth more than the sum of its parts. One of the ways to accomplish this is to effectively implement the required changes and address the related dynamics occurring in the new entity. Most mergers and acquisitions deals fail to accomplish many of the strategic objectives so optimistically projected in the initial announcements. Schmidt (2003) has identified five major roadblocks to M & A success, the last three of which are HR issues: Inability to sustain financial performance (64 percent), loss of productivity (62 percent), incompatible cultures (56 percent), loss of key talent (53 percent) and clash of management styles (53 percent). According to Marks (1997), human resource professionals should take an active role in educating senior executives about HR issues that can interfere with the success of the merger and with meeting key business objectives. His work has stated the important role of HCD to smoothen the transition. The following ways have been described by him:

1. Education of managers and employees
   To help employees and managers manage stress, low morale and productivity issues in work groups, educational seminars should be developed and delivered to minimize stress and uncertainty in the organization during the merger process. These seminars should focus on specific issues which affect employees rather than on general change management.

2. Development of newly formed teams
   The merger implementation may lead to problems as new teams are formed. These teams may face interpersonal conflict, unclear roles and responsibilities and confusing procedures as the focus of
leaders is on operational tasks. A process needs to be created to develop the newly formed teams. The process needs to be reviewed with managers and supervisors, and consultation should be provided.

3. Reinforcement of the new culture
When two organizations with very different cultures merge, the management should be helped to preserve the best aspects of the old company and to carry them into the new company. What cultural characteristics and values senior executives want to preserve from their respective companies should be understood along with understanding what they don’t want to keep and what new characteristics they want to introduce in the new organization. A list should be made and each level of management should be asked for feedback. Management should be provided with a development tool. All levels of management should be surveyed about three months after the merger, to assess progress toward the new culture and feedback should be provided to managers.

Methodology

Both quantitative and qualitative study has been carried out. Methodological triangulation (Denzin, 1978), was done where both quantitative and qualitative methodologies were used because of the following reasons:
1. Methodological triangulation (using quantitative and qualitative methodologies) yields greater insights than a single research methodology.
2. Blending and integrating methods and data in studying the same phenomena can capture a more complete, holistic and contextual portrayal of the subject under study, by eliciting data leading to new hypotheses or conclusions, for which single methods would be blind.
3. The weaknesses and limitations of each individual method will be counterbalanced by the other method, exploiting the assets, and neutralizing, rather that compounding the liabilities (Jick, 1983).

Quantitative Research Method

Positivism was selected as a paradigm for research. The research design has been described as follows:

Objective of the Study

To find answer to the following research questions:

Q1. Which are the most frequently used human capital development interventions during M & A?
Q2. Of the 4 major roles of HR during mergers and acquisitions, what is the comparative significance of the human capital development role of HR in the service sector industry?

Sample

Responses were taken from 19 HR heads of 19 large/ midsized service sector organizations which had been merged or acquired. All mergers and acquisitions chosen were horizontal type since they involved competitor firms (Gaughan, 2002) and had a similar intensity of people issues. The objective of all 19 mergers and acquisitions (Appendix 1) was to increase market share by becoming a bigger force.

Data Collection

Data was collected using a close ended questionnaire having 44 items. Questionnaire was designed using the theory on the role of HR (Ulrich, 1997; Ulrich and Brockbank, 2005). It was prepared around four broad HR roles during mergers and acquisitions. Role 1 had items
(interventions) which were used pre-merger and acquisition and Roles 2, 3 and 4 had items (interventions) which were used during integration stage. Responses were collected from top HR heads who had been part of the pre- integration and integration teams.

**Data Analysis**

Statistical analysis was carried out using SPSS software. Frequency and percentage mean was used as a technique of analysis.

**Qualitative Research Method**

The case study method has been used for current research. Case study is a research methodology that focuses on understanding the dynamics present in a management situation (EEinhardt, 1989). The research design has been described as follows:

**Objective**

The objective of this research is to study the human capital development role of HR during an acquisition.

**Unit of Analysis**

The unit of analysis is Hutchison Essar’s acquisition by Vodafone

**The Research Proposition**

The proposition is that the human capital development role of HR plays an important role during mergers and acquisitions.

**Data Collection and Analysis**

Primary data was collected through interviews with the senior HR team at Vodafone. Mr. Sandeep Gandhi, the VP HR at Vodafone Essar was the main source of information for carrying out the research.

**Quantitative Study Findings and Interpretation**

The present study found that the human capital development role of HR during mergers and acquisitions involved the following HR interventions/activities:

1. On-the-job Soft Skills Training Programme
2. On-the-job technical skills Training Programme
3. Off-the-job soft Skills Training Programme
4. Off-the-Job Technical Skills Training Programme
5. Online Training
6. Career Pathway
7. Team Intervention
8. Intergroup Intervention
9. Structural Intervention
10. Comprehensive Intervention
11. Orientation Programme
12. Workshops on Vision Development
13. Workshops on Communicating Values/Philosophy
14. Deputation to Acquiring Company

The use of all the above interventions fell in the range of 81.1% to 21.6%. Table 1 depicts the frequently used human capital development interventions. The percentage mean of the 4 major roles of HR during mergers and acquisitions was calculated (Table 2).

**Result and Discussion**

The quantitative study findings led to the interpretation that of the 14 interventions found to have been used as part of human capital development role of HR, the most popular were (in descending order of frequency of usage) On-the-Job Soft Skills Training Programme, Career Pathway, On-the-Job technical Skills Training Programme, Team

</tbody>
</table>

Intervention, Comprehensive Intervention, Orientation Programme, Workshop on Values and Philosophies and Structural Intervention. It was also found that in service sector organizations, the Human Capital Development role (R4) had a mean of 43.99 which was the highest among the 4 HR roles studied (Table 2). It is thus interpreted that of the 4 HR roles the human capital development received the maximum focus during mergers and acquisitions in the service sector industry. It is also seen that Employee Advocacy role (27.94) and HR Due Diligence (31.58) received less importance as compared to Human Capital Development and Functional Expertise role.

Qualitative Study Findings and Interpretation

Case Example: HR Role during the Acquisition of Hutchison Essar by Vodafone

Introduction

In February 2007, British telecom giant Vodafone acquired a 67 per cent stake in Hutchison Essar from Hutchison Telecom International for about $11 billion. When Hong Kong-based Hutchison Whampoa decided to get out of the Indian market, Vodafone emerged as the top bidder for majority stake in India’s fourth largest mobile player Hutch-Essar, beating Anil Ambani Group’s Reliance Communications, a consortium led by Hinduja, and Essar (Jayaram, 2007). In one of the biggest brand transition exercises in recent times, Hutch, country’s fourth-largest mobile service provider was renamed Vodafone on September 21, 2007. Approximately Rs. 250 crore was spent by Vodafone on the high-profile transition. Vodafone had acquired 67 per cent in Hutchison Essar from Hong Kong-based Hutchison Whampoa, and completed the acquisition of Hutchison Essar on May 9, 2007. As of today, Vodafone Essar is owned by Vodafone 67% and Essar Group 33%. It is one of the most successful acquisitions in the telecom industry. As on August 31, 2009, The company across India has over 80.87 million customers.

The Strategic Intent

As part of the expansion strategy of Vodafone, the company, through the Hutch acquisition started its operations in India, which was witnessing an addition of five
million new mobile subscribers every month. India had emerged as the fastest growing mobile market, overtaking China in September 2006. In outlining Vodafone’s strategic priorities in May 2006, the then Vodafone CEO Sarin had highlighted that the organization would pursue “selective opportunities to extend footprint” in the emerging markets.

About Vodafone

Vodafone is a British mobile network operator, with its headquarters in Newbury, Berkshire, England, UK. It was founded in 1983 as Racal Telecom, It is the largest mobile telecommunications network company in the world by turnover, and has a market value of about £75 billion (August 2008). Vodafone currently has operations in 31 countries and partner networks in a further 40 countries. The employee strength world wide is 79,000 (2009). The name Vodafone comes from voice data fone, chosen by the company to “reflect the provision of voice and data services over mobile phones”. As of 2009, Vodafone had an estimated 303 million customers in 31 markets across five continents. On this measure, it is the second largest mobile telecom group in the world behind China Mobile. Arun Sarin (July 2003- July 2008) was the driving force behind the company’s move into emerging markets such as Asia and Africa, through the purchases such as that of Turkish operator Telsim, and a majority stake in Hutchison Essar in India. (Vodafone, 2009; Wikipedia, 2009)

About Hutch

Hutchison Telecom is a subsidiary of the Hong Kong-based Hutchison Whampoa Group. In 1977, Hutchison had acquired all stakes of companies Hong Kong and Whampoa Dock and became Hutchison Whampoa Limited. In 1992 Hutchison Whampoa and its Indian business partner Max India, a healthcare company owned by Singh, established a company that in 1994 was awarded a license to provide mobile telecommunications services in Mumbai (formerly Bombay) and launched commercial service as Hutchison Max in November 1995. Max sold its stake of 41 percent in the Indian venture - then known as Hutchison Max - to an Indian industrial group, the Essar Group. Having consolidated its five entities under Hutchison Max Telecom Ltd (HMTL), the name of the company was changed to Hutchison Essar Ltd. In Delhi, UP (E), Rajasthan and Haryana, ESSAR was the major partner (Essar, 2008; Wikipedia, 2009). But later Hutch took the majority stake. Hutchison Essar Limited started operations under the brand name ‘Orange India.’ It was then changed to ‘Hutch’. In December 2006, Hutch Essar re-launched the “Hutch” brand nationwide. Hutch expanded rapidly to become the third largest mobile service provider in India and furthered its market share through the acquisition of BPL.

Roles of HR during Acquisition of Hutch by Vodafone

As Vodafone had acquired Hutch, the culture and climate of Hutch had to be changed to that of Vodafone’s. When dealing with people issues, the role of HR is very significant. HR played four important roles differing in their intensity during the acquisition as described below.

Pre-Acquisition

HR Due Diligence Role

HR due diligence is carried out to understand and align an enterprise’s intangible assets which comprises of HR issues and culture. The role of HR during the pre-acquisition stage was not found to
be very significant. In the pre-acquisition phase an informal taskforce was created comprising of business heads and HR heads. In India, a transition team of 40 members was set up which consisted of very senior executives from the acquiring company Vodafone as well the acquired organization, Hutch. As the transition team was an apex body, its size was limited to 40. Due diligence activities were carried out with special focus on talent profiling. The acquired talent was profiled extensively to know about the available skill sets.

**Post-Acquisition**

**Employee Advocacy Role**

Organizational changes are mostly met with feelings of anxiety and doubt (Kübler-Ross, E., 1969). The feelings are very acute when an organization is taken over and there are accompanying redundancies and layoffs. The employee advocacy role of HR takes care of the feelings and emotions of employees. In case of the Hutch takeover, employee advocacy role was not found to be very significant. On-line communication and meetings were important interventions used as part of the employee advocacy role. The managing director of Hutch(India), Mr. Ashim Ghosh started web cast to facilitate communication. The web cast technology involved broadcasting of audio and visual information regarding the acquisition and enabled the HR to effectively communicate with the employees over the internet. Employees were communicated with every seven days. Corporate HR also had face-to-face meetings with employees and communicated to them about what the company was doing.

**Functional Expertise Role**

The administrative functions of HR such as compensation and staffing are performed as part of the functional expertise role. HR was found to have played a significant role as a functional expert. The important interventions used were talent retention and compensation. As the sub strategy of the deal was talent acquisition, not a single employee was laid off post-acquisition. Talent retention was an important issue for the HR. Early warning system was used as a method to retain employees. Hutch, prior to the acquisition had a pay cycle from April to March. Post-acquisition, the pay cycle was changed to July-June. Salaries of employees were increased post-acquisition. The salary was increased to bring it to par with Vodafone pay scale. The hike ranged from 10 to 15%. Hutch had a compensation scheme, wherein 200-300% of the total employee’s cost to the company (CTC) was a part of employee stock option plan (ESOP). The scheme was continued post-acquisition.

**Human Capital Development Role**

Learning and development functions of HR are performed as part of the human capital development role. It was found to have received the most importance compared to the other roles of HR. The important interventions used were soft-skills training, technical training, workshop on values, team intervention, structural intervention, career pathway and orientation programmes. Orientation programme was conducted to facilitate change from the Hutch business model to the Vodafone business model. As part of the organization culture, the values of Hutch had been ‘Brave, Positive, Simple and Gorgeous.’ Vodafone had a different organization culture and the values were ‘Red, Rock solid and Restless.’ Because of the difference in values in the two organizations, there was a need for cultural integration. Workshops were used to facilitate the transition from the values of hutch to the values of Vodafone. Te
make the change, the Vodafone values were linked with the values of Hutch. For example, the Hutch employees disliked the color red as it was the color used in Airtel logo, the competitor. Red was thought of as the color of the enemy. HR changed the attitude of the Hutch employees towards the color red by linking the color red with restlessness about sales and a passion to perform. Also anecdotes related to Vodafone were shared with the Hutch employees during the workshops. There were 8000 fulltime employees and 25000 outsourced employees of Hutch. The organizational values of Vodafone was communicated to each and every employee of Hutch.

A training programme was held for Band 1 managers (General Manager and above). The training was on soft-skills as well as technical skills. The trainee group comprised of 5% of the employee population. It was done in association with an academic institution in India, the Indian School of Business. Case study method was used as a methodology and training was conducted for three and half days, in which learning was imparted in leadership skills, case laws, telecom space, people sensitization, and anxiety management. The group which underwent training, went back to their respective positions and helped diffuse the new culture into the whole organization. Thus a parallel learning system was created. The training was conducted for one and half days.

Career management of employees was done. Assessment centers assessed employees and promotions were offered to the performing employees. For example, a senior HR professional of Hutch was offered a promotion and migration opportunity to Turkey post acquisition. Also, destination India was treated as a bench mark, and top performers were given the opportunity to work in India. As part of comprehensive organization development intervention, workshop called ‘Huddle’ was organized and was conducted for 14-15% of the total strength of employees across 4-5 departments. The positive and negative aspects of the organization were discussed during the workshop which was extremely informal and full of fun. As part of action research approach to organization development, an employee satisfaction survey was also conducted across the company. Based on the data collected, action was taken to address the issues.

**Interpretation**

The case analysis found the following interventions to have been used during the integration stage of the acquisition of Hutchison Essar by Vodafone: On-the-job Soft Skills Training Programme, On-the-job technical skills Training Programme, Orientation programmes, Career Pathway, Team Intervention, Comprehensive Intervention. It is thus interpreted that human capital development role of HR played a very significant role during the acquisition as compared to the other HR roles. HR due diligence and employee advocacy roles was seen to have received less importance.

**Conclusion**

The quantitative study brought to light the different interventions used as part of the human capital development role of HR during mergers and acquisitions, namely, On-the Job Soft Skills Training Programme, On-the Job Technical Skills Training Programme, Off-the Job Soft Skills Training Programme, Off-the Job Technical Skills Training Programme, Online Training, Career Pathway, Team Intervention, Intergroup Intervention, Structural Intervention, Comprehensive Intervention, Orientation Programme, Workshops on Vision Development, Workshops on Communicating Values/
Philosophy, Deputation to Acquiring Company. The study also found that of all the above interventions, the most popular were On-the-Job Soft Skills Training Programme (81.1%), Career Pathway (81.1%), On-the-Job technical Skills Training Programme (67.6%), Team Intervention (64.9%), Comprehensive Intervention (54.1%), Orientation Programme (51.4%), Workshop on Values and Philosophies (51.4%) and Structural Intervention (43.2%).

The qualitative study led to the conclusion that human capital development is a very important HR role during acquisition. It received the maximum focus as compared to other roles of HR, namely, HR due diligence, employee advocacy, and functional expertise. The human capital development interventions used during the acquisition were On-the-job Soft Skills Training Programme, On-the-Job Technical Skills Training Programme, Orientation programme, Career Pathway, Team Intervention, Comprehensive Intervention and Workshops on Values.

The present study, on the basis of both qualitative as well as quantitative study, has led to the conclusion that human capital development is a very important role of HR during mergers and acquisitions. HR due diligence and employee advocacy role was found to have received less importance during mergers and acquisitions. The study has important implications for practitioners as well as academicians. As more and more organizations are undergoing radical changes in the face of global challenges, the study leads to the conclusion, that HR departments should have specialists in the areas of organization change management as HR role has been found to be very important during management of transformational change. As HR due diligence and employee advocacy roles were seen to have received less importance, and because the literature review on mergers and acquisitions brought to light their very high failure rates (Selden and Colvin, 2003), it can be hypothesized that the high failure rate of mergers and acquisitions is positively correlated with less importance given to HR due diligence and employee advocacy roles. There is thus a need for research on the hypothesis generated from the present research which could make a case for a more significant involvement of HR during mergers and acquisitions with special reference to HR due diligence and employee advocacy roles.
